EDUCATION

University of Waterloo

Bachelor of Applied Science, Computer Engineering

Waterloo, ON

Expected Apr. 2027

TECHNICAL SKILLS

Languages: Python, C/C++/C#, JavaScript, Typescript, Java, MATLAB

Infrastructure: AWS, GCP, React, GraphQL, Redux, .NET, Express.js, Next.js, SQL, git, Jenkins, LLM APIs

Concepts: Data Structures, Algorithms, Cloud Computing, Databases

EXPERIENCE

Varicent

Jan. 2026 – Apr. 2026

Software Developer

- Architected and implemented a React-based "autopilot" component that automates sales planning environment setup, reducing manual configuration time by 60%
- Improved platform stability and state management by migrating legacy providers to Redux, increasing frontend performance by 25%
- Enhanced geographical data visualization by integrating Mapbox radius indicators, allowing users to query sales data with high spatial precision

Blair Health

Jan. 2025 – Apr. 2025

Fullstack Developer

- Led development of a 0-to-1 telehealth platform in under 30 days, designing a secure PostgreSQL schema to safeguard PHI
- Accelerated menopause diagnostic timelines from a multi-year clinical process to under 10 minutes by engineering a mobile-first assessment platform and an AI-driven treatment recommendation engine
- Architected a graph-structured diagnostic module using PostgreSQL to automate medical flowcharts, bypassing traditional 12-month clinical diagnostic lags

Clearpath Robotics

May. 2024 – Aug. 2024

Software Engineer

- Engineered a coordinate transformation algorithm to map physical facility layouts to the app UI, enabling high-precision, automated robot pathfinding

BlackBerry

Sep. 2023 – Dec. 2023

Software Engineer

- Engineered scalable full-stack solutions for a multi-tenant console while modernizing endpoint Security architecture

BlackBerry

Sep. 2022 - Apr. 2023

Software Development Engineer in Test

- Identified and resolved 25+ critical defects in Cylance MTC platform, improving release quality and reducing bugs by 20%
- Expanded xUnit and Cypress.IO test coverage by 30%, enabling seamless MTC-UES integration testing
- Implemented Jenkins-based automation with PowerShell modules, cutting test cycle time by 40% across environments

Mollymawk Software

Jan. 2022 - Apr. 2022

Fullstack Developer

- Built React finance management and flight history, scaling to 200+ organizations via AWS Lambda and API Gateway
- Engineered an event-driven DynamoDB and S3 backend for decoupled flight and financial data processing
- Implemented OAuth and seamless authentication loading states, securing API access for 1,000+ daily users

PROJECTS

BranchAI | React, Ts, Vite, Gemini API, Netlify

- Built a React/TypeScript LLM chat interface with Gemini API integration, including persistent conversational context and a branching thread UX for asking focused follow-up questions on selected response text
- Implemented interactive subthread workflows with text highlighting, custom right-click branching, draggable branch cards, independent scrollable chat panels, and visual arrows linking source text to follow-up conversations

Spotify Intelligence AI | React, TypeScript, Node.js, Express, LLM APIs, Render

- Engineered a model-agnostic agent integrating Claude and Gemini LLMs, enabling users to autonomously query listening trends and manage their Spotify libraries via natural language
- Architected a secure, decoupled Express backend deployed on Render, implementing robust CORS policies and Spotify OAuth 2.0 session management to securely authenticate cross-origin requests
- Optimized LLM tool-calling latency and eliminated rate-limiting timeouts by engineering data-minimization pipelines, reducing Spotify API JSON payload bloat by 95% to accelerate real-time playlist generation.
