EDUCATION

University of Waterloo

Bachelor of Applied Science, Computer Engineering

Waterloo, ON

Expected Apr. 2027

TECHNICAL SKILLS

Languages: Python, C/C++/C#, JavaScript, Typescript, Java, MATLAB

Infrastructure: AWS, GCP, React, GraphQL, Redux, .NET, Express.js, Next.js, SQL, git, Jenkins, LLM APIs

Concepts: Data Structures, Algorithms, Cloud Computing, Databases

EXPERIENCE

Varicent

Jan. 2026 – Apr. 2026

Software Developer

- Enhanced the sales UI in React with mapping features, such as a Mapbox radius indicator, allowing clients to precisely query geographical sales data
- Engineered an "autopilot" component that automates the setup of sales planning environments from uploaded documents, eliminating manual configuration
- Migrated legacy state providers to Redux, improving the performance and stability of the React and TypeScript platform for sales teams

Blair Health

Jan. 2025 – Apr. 2025

Fullstack Developer

- Architected a 0-to-1 telehealth platform in under 30 days using Next.js, GCP, Vercel and Supabase, designing a secure PostgreSQL schema with strict RBAC to safeguard PHI
- Engineered a graph-structured assessment module to automate patient diagnostics directly from medical flowcharts
- Developed an AI recommendation engine that generates precise, dosage-level patient treatment plans

Clearpath Robotics

May. 2024 – Aug. 2024

Software Engineer

- Engineered a coordinate transformation algorithm to map physical facility layouts to the app UI, enabling high-precision, automated robot pathfinding

BlackBerry

Sep. 2022 – Dec. 2023

Software Engineer

- Engineered scalable React and .NET full-stack solutions for the Cylance multi-tenant console while modernizing the Unified Endpoint Security architecture

BlackBerry

Sep. 2022 - Apr. 2023

Software Development Engineer in Test

- Identified and resolved 25+ critical defects in Cylance MTC platform, improving release quality and reducing bugs by 20%
- Expanded xUnit and Cypress.IO test coverage by 30%, enabling seamless MTC–UES integration testing
- Implemented Jenkins-based automation with PowerShell modules, cutting test cycle time by 40% across environments

Mollymawk Software

Jan. 2022 - Apr. 2022

Fullstack Developer

- Built React finance management and flight history, scaling to 200+ organizations via AWS Lambda and API Gateway
- Engineered an event-driven DynamoDB and S3 backend for decoupled flight and financial data processing
- Implemented OAuth and seamless authentication loading states, securing API access for 1,000+ daily users

PROJECTS

Spotify Intelligence AI | React, TypeScript, Node.js, Express, LLM APIs, Render

- Engineered a model-agnostic agent integrating Claude and Gemini LLMs, enabling users to autonomously query listening trends and manage their Spotify libraries via natural language
- Architected a secure, decoupled Express backend deployed on Render, implementing robust CORS policies and Spotify OAuth 2.0 session management to securely authenticate cross-origin requests
- Optimized LLM tool-calling latency and eliminated rate-limiting timeouts by engineering data-minimization pipelines, reducing Spotify API JSON payload bloat by 95% to accelerate real-time playlist generation.

PickupTracker | React, Tailwind, Vite, Node, Express, Render

- Developed a mobile-first sports-recreation pickup-queue web app using React and Tailwind, facilitating real-time team rotation and live status tracking for 1,500+ teams
- Built an Express backend utilizing file-based persistence to automate state transitions and custom matchmaking modes
- Designed an intuitive, low-latency mobile UI that allows players to instantly join queues and view live rotations.
